# Color Codes and Counting Directions for Fiber Optic Cables

The above chart is a quick reference guide for identification of fibers and tubes in the most common cable designs. Detailed information about the color code systems for all cable types are available in the following pages.

1. About Color Code Systems

Fibers, tubes and ribbons in fiber optic cables are marked with different colors and bar codes to facilitate identification. Hexatronic offers cables with color code systems according to all international and national standards and for all types of fiber optic cables. Custom specific color code systems are available on request. This document describes the most common color code standards for cable designs, namely:

- TIA/EIA-598 (Bellcore)
- S12
- Standard Type E
- FIN2012

All systems are characterized by using 12 different colors to identify fibers that are grouped together in a common bundle such as a tube, ribbon, yarn wrapped bundle or other types of bundle. In all charts in this document, all types of bundles are referred to as “tubes”. If more than 12 fibers or tubes are to be separated, the color sequence is normally repeated, but with ring marks or lines on the colored fibers and tubes. Some systems such as the S12 and Standard Type E use only a few tube colors and the tube is instead identified by its position in the cable.

To make the charts in this document easy to read, all unnecessary information is removed.

2. TIA/EIA-598 (Bellcore)

This color code, formerly referred to as the “Bellcore”-standard, is the most recognized system worldwide.

If fiber 13-24 are used in a loose tube design, the color sequence is repeated for fiber 13-24, but fibers are ring marked. Fiber 20 is clear (uncolored) since ring marking will not be visible on black colored fibers.

3. S12

The S12 color code was introduced in 2012 by Skanova (Sweden) to be used for micro cables and nano cables. The standard is now widely used in Sweden and other countries.

**Tube color coding:**

Two options of tube color codings exist in the S12 system:

**Note about fiber ribbon cables and the S12 system:**

To identify ribbons in a fiber ribbon cable there are two allowed methods in the S12 system:

1. Marking with stripes on each ribbon in each slot
2. Making each ribbon unique in each slot by deviating from the color sequence in the table above. Each ribbon will have its own color sequence.

Method 1 is by far the most convenient since the ribbon is easily identified without the need to consult complicated color charts. Only 4 different colors are used for fibers in the ribbon and these are the same for every ribbon. It is also much easier to identify the
4. Standard Type E
Standard color code system originally jointly defined by Televerket (Telia) and Ericsson in Sweden. The system is used worldwide but is gradually replaced by the S12 and TIA/EIA-598 systems in many regions.

<th>7</th>
<th>8-16</th>

</thead>
<tbody>
<tr>

<td>Blue</td>
<td>White</td>
<td>Blue</td>
<td>White</td>
</tr>
</tbody>
</table>

The color sequence is repeated on additional tube layers and starts with 1 (red) on each layer.

**Exceptions:**
Tube identification in slotted core loose tube cables can alternatively be done by identifying the three line markings on the slotted core profile as shown in the figure below. Note that there is always only three line markings regardless the number of slots.
5. FIN2012
The FIN2012 is a color code standard used in Finland.

Fiber color coding:

Tube colors for cables with more than one layer according to FIN2012 will differ depending on cable design. Please contact Hexatronic for more information.
6. Fiber Ribbon Cables

This section describes the color codes for fiber ribbon cables according to both the S12 system, (method 1 with stripe markings) and Standard Type E.

**Slotted Core Profile, 4-fiber Ribbon**

- **Ribbon marking**
  1 line
  2 lines
  3 lines
  4 lines

- **Fiber color**
  1 red
  2 blue
  3 white
  4 green

**Slotted Core Profile, 8-fiber Ribbon, 8 to 192 Fibers**

- **Ribbon marking**
  1 line
  2 lines
  3 lines
  4 lines

- **Fiber color**
  1 red
  2 blue
  3 white
  4 green
  5 red
  6 blue
  7 white
  8 green
Slotted Core Profile, 8-fiber Ribbon, 288 to 640 Fibers

Fiber color inside the ribbon:
Red, Blue, White, Green, Red, Blue, White, Green
7. Submarine Cables (Loose Tube)

The fibers are color coded according to Standard Type E.

The fibers are grouped in bundles of 12 fibers. The groups are held together with yarn of different colors to be able to separate the bundles.

**Color coding of the fibers (bundle with yarn)**

Fiber 1 Red  
Fiber 2 Blue  
Fiber 3 White  
Fiber 4 Green  
Fiber 5 Yellow  
Fiber 6 Slate  
Fiber 7 Brown  
Fiber 8 Black  
Fiber 9 Orange  
Fiber 10 Purple  
Fiber 11 Pink  
Fiber 12 Turquoise

**Yarn color**

Yarn 1 - Red (fibers 1-12)  
Yarn 2 - Blue (fibers 13-24)  
Yarn 3 - White (fibers 25-36)  
Yarn 4 - Green (fibers 37-48)
