

Corporate Profile

Hexatronic Oceania

Hexatronic Group

Hexatronic enables non-stop connectivity for communities worldwide. We partner with customers across five continents – from telecom operators to network owners – offering leading-edge fiber technology and solutions for any and all conditions.

Together, the companies in Hexatronic Group develop products and world-class solutions that create development opportunities for people across the world.

Hexatronic offers a complete range of passive fiber optic infrastructure. We design, develop, manufacture, and market our own products, solutions, and services to work together optimally. Also, we represent leading worldwide manufacturers of specialized tools and equipment.

Owning our complete production chain gives us great flexibility and enables us to respond quickly to unique customer requests. With innovation, vast technical knowledge, a high level of service, and complete commitments, we work every day to improve our offering.

World class innovative design and development

We always strive to be a step ahead of the market needs, and to constantly enhance our products' properties. That is why we continuously develop products, solutions, processes, and methods to improve network performance for the customers and reduce the environmental footprint.

Fully flexible – and confident

With our total control over the production chain, we safeguard capacity – and have the flexibility to customize production for unique customer requests.

We are so confident with our well-considered product range – with its high quality and maximum compatibility – that we offer extended warranties.

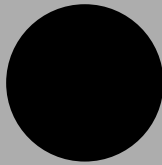

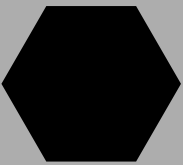

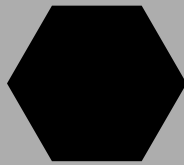

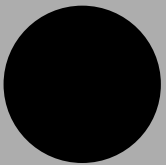

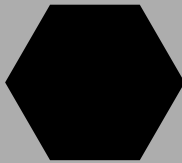

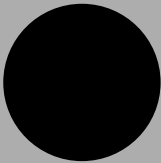

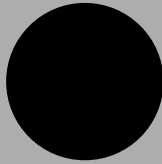

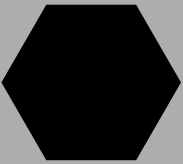

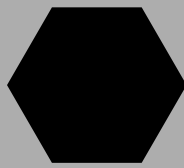

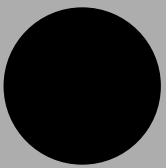

Adding the keys to maximize your outcome

There is a massive shortage of people who know how to optimally design, project manage and install fiber optic networks.

That is why we offer customized training programs, field support, design and project management services.

Group Companies Overview

The Hexatronic Group proudly encompasses four distinguished companies across the Oceania region. Our capabilities in the region include multiple offices, warehouses and distribution centres, manufacturing of duct assemblies, cable assemblies and connectivity solutions, integration labs, service centres and a skilled team ready to support you.

Hexatronic are leaders in building digital infrastructure, which are essential enablers for communities, businesses and individuals to grow and develop.

With in-house manufacturing, Hexatronic offer solutions that help our customers and partners towards successful business and projects. In order to further support customers, we also offer design, project management, field support and training services.

With presence throughout Australia, New Zealand and the Pacific Islands, we are uniquely placed to service our clients by being a close and trusted partner in your telecommunications projects.

OSA delivers, designs, and supports some of Australia's largest telecom and infrastructure projects. Through our five combined showrooms, offices and warehouses located strategically across Australia, high stock levels and trusted vendor partnerships, we offer short lead times and simplified logistics to our customers.

OSA specialise in all aspects of passive infrastructure, while maintaining expertise and experience in a full range of associated test, measurement and active equipment. OSA also offer value-add services through our three labs where we support our customers by testing new technologies, pre-staging, quality-assuring their projects and designing new systems.

Brisbane, Australia and Wellington, New Zealand

- Microduct and microduct assembly production lines with
- Microcable and air blown fiber units
- Armoured and customised fiber cable
- Blown fiber accessories, installation equipment and tools
- Air Blown Fiber to the home connectivity including aerial and underground
- Hybrid fiber and power systems for Industrial Ethernet, 5G, CCTV and access control
- Data centre connectivity and interconnects
- Wireless and fiber to the antenna cabling, mounting and accessories
- Traditional cabling systems for commercial and fiber to the home applications
- Sub-sea fiber cable and systems
- Harsh environment connectivity and cabling
- Network design and integration
- Field support and delivery partner training

Hexatronic in Oceania partner with carriers, utilities and data centres across Australia, New Zealand and the Pacific to provide cutting edge fiber to the home, transport networks and high capacity interconnects to the region. Our core line of designed and manufactured products includes duct and duct assemblies manufactured locally in New Zealand, low to ultra high core count cables and fiber units, as well as a full range of traditional cable and connectivity solutions. Operating additional manufacturing centres for duct and fiber cable across the globe, we ensure we are providing value to network operators by bringing production close to our clients, ensuring timely deliveries, scalability and redundancy of supply. Supporting our clients is key to ensuring mutually beneficial outcomes and our team of regional field support managers engage with internal and external delivery partners to ensure successful outcomes for network operators.

Hexatronic supports the following strategic areas in the Oceania region: Fiber Solutions, Harsh Environment, Wireless and Data Centre.

Fiber Solutions engages with Carriers, Dark Fiber Operators, Utilities and Infrastructure developers to provide fiber to the home and interconnection links including sub-sea for cutting edge broadband connectivity.

Partnering with our local and global **Harsh Environment** companies, we are able to support established and emerging technologies to suit defence, mining and industrial applications.

Leveraging our global **Wireless** expertise, Hexatronic is equipped to service carriers, private network owners and others to provide tailored fiber to the antenna cabling, accessories and associated equipment.

Finally, our **Data Centre** expertise extends from high density connectivity, through to back-haul and interconnects and even consultation, professional services and design.

- Manufactured fibre optic and copper assemblies for commercial, industrial, harsh environment and wireless applications
- GPON and active equipment including integration and commissioning
- Industrial Ethernet, security and access control
- Purpose built labs for network design, pre-staging, testing and post sales support
- Full RMA facilities including investigation and repair
- EXFO Certified Service Centre (CSC)
- Trend Networks calibration centre
- Fusion splicer service and repair
- National warehousing, supply chain and distribution over five branches
- Product design, innovation and customisation
- Solution experience and integrated training centres
- Wide range of vendor partnerships including globally recognised structured cabling, CCTV and active equipment providers

Regardless of the size or location of the project, at OSA we pride ourselves on our ability to deliver cutting edge equipment to suit the needs of your network. We support a broad range of products including optical

fiber and associated equipment, copper structured cabling, air blown systems, racks cabinets & ODFs, active equipment, test and measure, fusion splicing, CCTV and professional services.

Fibre Optic Systems

At Fibre Optic Systems, we operate a large production and warehouse facility in Melbourne Australia that specializes in fiber optic cables and connectivity solutions. Our production plant services the Hexatronic Group companies throughout the region, providing local manufacture and assembly. Our flexibility when working with our clients and partners sees us offering a wide range of standard and customised patch leads, pre-terminated cables and other passive connectivity. Using our expertise, we navigate the complex landscape of passive fiber connectivity, ensuring you get the right equipment for your network.

A Hexatronic
Group Company

Melbourne, Australia

- Modern manufacturing plant encompassing over 2000m² of office, warehouse and production facilities
- Customised fiber optic assemblies and patch leads
- Harsh environment and broadcast connectivity including physical contact, hybrid and expanded beam
- Design, manufacture and assembly of termination enclosures and accessories
- Industry leading range of cables for all environments including inside and outside plant, harsh environment, mining and broadcast
- Fusion splicer service and repair for all leading brands
- In house product design capabilities including full CAD capabilities
- Quick turnaround of manufactured products and broad stock holding of standard network components

Using our expertise and experience garnered over more than twenty years of manufacturing optical cable assemblies, we have the knowledge and ability to manufacture the right cable for your network. Our modern production facility boasts five connector polishing lines, modern test equipment and a broad stock holding of both common and uncommon connector types for telecommunications, industrial, harsh environment, process control and broadcast. Our made to order assemblies offer ease of install and

interoperability across a range of modern and legacy networks. Wherever your network is located, we offer cables suitable for your environment from hauling through existing ducts, laying on cable ladder, in mine sites underground or direct buried in the ground, we have a cable to suit your needs. Our broad range of assemblies, locally designed connectivity equipment and fiber cable options are available throughout the Hexatronic Group companies in the region.

atg Technology Group

At atg, our global vendor partnerships enable our business to service our customers with a wide range of fiber cable & connectivity solutions, active networking hardware, test & measure equipment and an array of services and support. Our primary business activity is focused in the WISP, ICT, utility, enterprise and data centre markets, where we provide complete end-to-end optical solutions.
